Gary Null Ph.D.'s 32 year journey of helping & counseling 1,200 individuals with AIDS defining illnesses

- Gary's text book *AIDS a Second Opinion*, dozens of articles, press conference, all day symposium on improving or reversing AIDS using natural, & non-toxic protocols.
- Hundreds of articles by scientists throughout the world who have challenged various aspects of the official war on AIDS.
- 6 Gary Null documentaries, and others showing the pain profit & politics of AIDS.
- A list of nearly 3,000 leading scientists, physicians, gay activists and journalists who have joined together to offer a different understanding of AIDS

## AIDS A SECOND OPINION

Gary Null, Ph.D.  
WITH JAMES FEAST

In this first book to bring both establishment and dissenting views of the AIDS crisis into one volume, Gary Null unravels the halftruths that many argue have marred the study of this disease from the start. In clear, jargon-free prose, *AIDS: A Second Opinion* presents an unbiased, unflinching discussion of all sides of each issue, covering such topics as elastic AIDS statistics, the questionable thesis that AIDS originated in Africa, and the scientific shenanigans surrounding the discovery of HIV.

Null argues further that the AIDS drama has not only exposed problematic issues having to do with the functioning of U.S. medical institutions, but is calling into question some of the most hallowed beliefs in human biology, for example, the validity of Koch's postulates for establishing the existence of a new virus. He goes on to explore a new type of health care, grounded in patients' own choices and dispositions, that poses a challenge to the top-down, expert-controlled medical systems favored by the establishment.

Drawing from Null's many years of study of alternative, traditional, and orthodox medicine as well as from interviews with many long-term survivors, the book dissects the claims of the AZT and drug-cocktail approach to treating AIDS and offers a trilogy of treatment strategies based on a new holistic paradigm that concentrates less on the elimination of one ailment and more on how to enhance the immune system and improve overall functioning.

PART SIX  
ALTERNATIVE  
TREATMENTS

## Nutritional and Lifestyle Changes

When HIV-infected patients who had been asymptomatic or had early ARC are evaluated, they usually exhibit decreased body mass, body fat, and total protein, which may result in part from the frequently reported gastrointestinal dysfunction, diarrhea, and malabsorption.<sup>1</sup> This malabsorption may be an early and continuing consequence of HIV infection, for "small intestinal malabsorption is a major component in the severe wasting seen in some HIV-infected patients with chronic diarrhea."<sup>2</sup> If this is so, and the virus creates problems in nutrient uptake at the same time, these problems will stimulate the virus. As an article in the *Annals of the New York Academy of Sciences* puts it, "Once occurring, malnutrition leads to immunosuppression, infection, and mucosal damage, with failure of normal intestinal mucosal turnover and healing, resulting in further malnutrition."<sup>3</sup>

(You'll note that this therapy assumes HIV plays a cofactorial role in AIDS.) Malabsorption in HIV-infected patients, at an early or a later stage, might also result in part from defective gastric acidity (possibly from an autoimmune reaction against gastric mucosa). For example, in forty-eight AIDS patients the mean fasting pH of gastric juice was 5.9, compared to 2.9 in controls.<sup>4</sup> The resulting multiple depletions are insidious and progressive. Malnutrition in HIV-infected patients can result not only from malabsorption of nutrients but also from anorexia (high in HIV positive patients), and from high resting energy expenditure (REE), which also occurs with HIV infection.<sup>5</sup> Whereas in malabsorption, the body is not drawing sufficient nutrition from in-

## Nutritional Depletion and Augmentation

### Vitamins and Other Nutrients

The main object of this chapter will be the examination of Dr. Calapai's practice; however, in discussing his extraordinary work, we will be looking at the select vitamins and other nutrients he has employed in reempowering the immune system and aiding absorption. We will thus be leaving in the shade many other supplements that have shown some effectiveness in fighting AIDS but are not featured in this practice. The use of supplementation is an area in which more work needs to be done. Still, many studies that prove the benefits of different nutrients in combating the immunodeficiency disease have already appeared, but they have received little of the recognition they merit.

Having immersed myself for many years in the scientific literature that examines the health value of different vitamins, minerals, and other supplementation, I thought it might be of use if, before we examined Calapai's practices, I provided a compendium of some recent findings on different substances in relation to their alleviation of AIDS or AIDS-related diseases. I will also include my notes on substances such as bifidus, which have not been tested against AIDS but have been proven to support the immune system or aid absorption, properties that likely would be helpful in combating immunodeficiency diseases.

So before outlining Calapai's work, I will make a brief mention of studies reported in refereed journals concerning these nutrients. Notes refer the reader to the exact citation so that investigations can be consulted further at the source.

## Lifestyle Changes

At the heart of the new medical paradigm—a description of its properties has appeared as a submotif of this book—is the idea that one's state of health or illness is the product of multiple, interconnected factors, both in the person's surrounding environment and internally. Moreover, to identify the cause of a viral disease, for example, one has to sort through not only what "bug" has followed what route of transmission to get into the body, but, equally importantly, learn what state of susceptibility has made the person ready to receive the bug with open arms, as it were. This is to say, a disease does not get the opportunity to infiltrate and begin lordling itself over a human body unless that body already has a defense system that is functioning suboptimally.

This is not to say a person should be blamed for his or her disease (in that the patient allowed his or her immune system to deteriorate). Rather, I am saying a person is quite often "partially" to blame in that he or she has adopted an unhealthy lifestyle, taking drugs, for example, which has ended up weakening immunity. It goes without saying that in some instances external factors may far outweigh lifestyle as causes behind the eruption of a disease. Moreover, in some cases, one's lifestyle may not be under one's own control. (Think of our prisoners in our scandalous jail system, who are often given a diet of unrelentingly starchy, unwholesome foods. Or think also, to repeat an earlier thought, of smokers in the United States in the 1940s, when even the vast majority of doctors told them cigarettes would not affect health.) Taking all this under advisement, I still would have to say that in my experience, for most people who get

## Dr. Christopher Calapai

### Nutritional Support: Dr. Calapai's Philosophy

The first doctor to receive an in-depth profile here is Christopher Calapai, whom I interviewed at length. He was kind enough to walk me through all his protocols and share his healing philosophy, which in a nutshell is this: Immune function is strongly influenced by nutritional status. In treating immunological disorders—AIDS currently being the most prominent—it seems eminently reasonable to pay close attention to nutrition.

Regrettably, Calapai told me, this rather elementary fact is usually rated as of low or no importance by conventional medicine. "We see many patients who, as soon as they were determined to be HIV positive, were put on antiretroviral medication, with no attention to their diet, or other aspects of their lifestyles that might affect their immune function." This in spite of the fact that "there is considerable published research that supports our view that nutrition is highly relevant and should not be neglected."<sup>1</sup>

### Approach, Method, Results

Dr. Calapai asks new patients to bring in a week's worth of their diet history, in which they jot down any food they consumed over the period as well as noting other intakes, such as cigarettes. He goes over this history meticulously. He then tells them how important it is to institute certain lifestyle changes that are beneficial for them.

## Dr. Emmanuel Revici

In contrast with Dr. Calapai's therapeutic approach, which (as we have tried to show) rests upon a broad framework of research by investigators in nutritional and herbal methods, Dr. Emmanuel Revici's therapeutic approach is highly individual, and his theory of health and disease is largely his own creation, carefully worked out both in the laboratory and in the clinic over more than fifty years.

Thus, it will be in order, before we move onto an assessment of his protocol and results in treating people with AIDS, that we get some idea of his framework.

### Metabolic Imbalance and AIDS: Dr. Revici's Philosophy

Dr. Revici's theory of health and disease concerns the balance and imbalance of opposing processes. The body undergoes two basic processes: the anabolic (building up) process, and the catabolic (breaking down) process. The metabolism cycles through both processes. "The two antagonistic intervening factors... act alternately, each being predominant for a period of time."<sup>1</sup>

As in the Chinese theories we glanced at a few pages ago, the ebb and flow of these processes need to go on in an even rhythm for health to be maintained. If they fall out of sync, disease will come about. "Abnormal changes can take place in either of two opposite directions... resulting from the exaggerated predominance of one of the coupled factors over its antagonist," Revici writes.<sup>2</sup>

## Anatomy of an Epidemic

By Brent Leung

‘The HIV/AIDS story is being rewritten, and this is the first film to present the uncensored POVs of virtually all the major players -- in their own settings, in their own words. It rocks the foundation upon which all conventional wisdom regarding HIV/AIDS is based. If, as South African health advocate Pepsile Maseko remarks, "this is the beginning of a war...a war to reclaim our health," then House of Numbers could well be the opening salvo in the battle to bring sanity and clarity to an epidemic clearly gone awry.’
